

Patient Name:	John Doe	Report Date:	7/2/2026, 6:57:45 PM
Patient ID:	MR-2026-22558	Referring Doctor:	Dr. Sarah Jenkins
Age / Gender:	42 / Male	Inference Engine:	ResUNet++ Multitask (CUDA)
Clinical Indication:	Frequent headaches & localized pressure		

MRI IMAGE VIEW (OVERLAY)

Figure 1.0: Processed T2-Weighted Brain MRI Scan. Highlighted red contour outlines segmented tumor boundaries.

Diagnostic Finding

PRIMARY DIAGNOSIS
GLIOMA TUMOR

CONFIDENCE
100.0%

Classification Breakdown

Glioma	100.0%
Meningioma	0.0%
Pituitary	0.0%
No Tumor	0.0%

Quantitative Analytics

Segmentation Status	Anatomical Success
Segmented Area (pixels)	2,066 px ²
Brain Section Area %	3.15%
Est. Physical Size	~29.75 cm ²
Anatomical Centroid	(80, 93)
Brain Hemisphere Quadrant	Left Anterior
Bounding Box Dimensions	39 × 79 mm

Physician Remarks & Recommendations

Hyperintense lesion detected in the cerebral area. Coordinate findings with patient symptoms and plan follow-up high-resolution imaging.

Diagnostic Software Sign-Off (MRI.AI Engine)

Attending Radiologist / Physician Signature

IMPORTANT CLINICAL NOTICE: This report is automatically generated using a Deep Learning Convolutional Neural Network (CNN) trained on neural MRI images. The software is designed to assist radiologists and physicians by highlighting structural anomalies and classification statistics. The findings in this report do not constitute a definitive medical diagnosis and should only be used as a secondary reference alongside primary radiological evaluations, patient history, and physical examinations.
